EXPERIMENT NO: 3 USER STORIES AND AZURE BOARDS MANAGEMENT

AIM: To create and manage USER STORIES for the system “PRECISION DISASTER RECOVERY (PDR-SYNC)” using Azure Boards for agile project planning and tracking.

THEORY:

A USER STORY is a short and simple description of a system feature written from the perspective of the end user.

User stories are used in Agile software development to:

- Capture user requirements
- Plan project tasks
- Track development progress
- Improve collaboration among team members

A standard user story format is:

AS A <USER>
I WANT <FUNCTION>
SO THAT <PURPOSE>

Azure Boards is used to:

- Create user stories
- Assign tasks
- Monitor progress
- Manage sprint activities

COMPONENTS OF USER STORIES

TITLE: Represents the name of the functionality

ASSIGNED TO: Represents the developer responsible for the task

STATE

Represents progress status such as:

- New

- Design
- Active
- Closed

AREA PATH: Represents project grouping/category

NOTATIONS / TERMINOLOGIES USED:

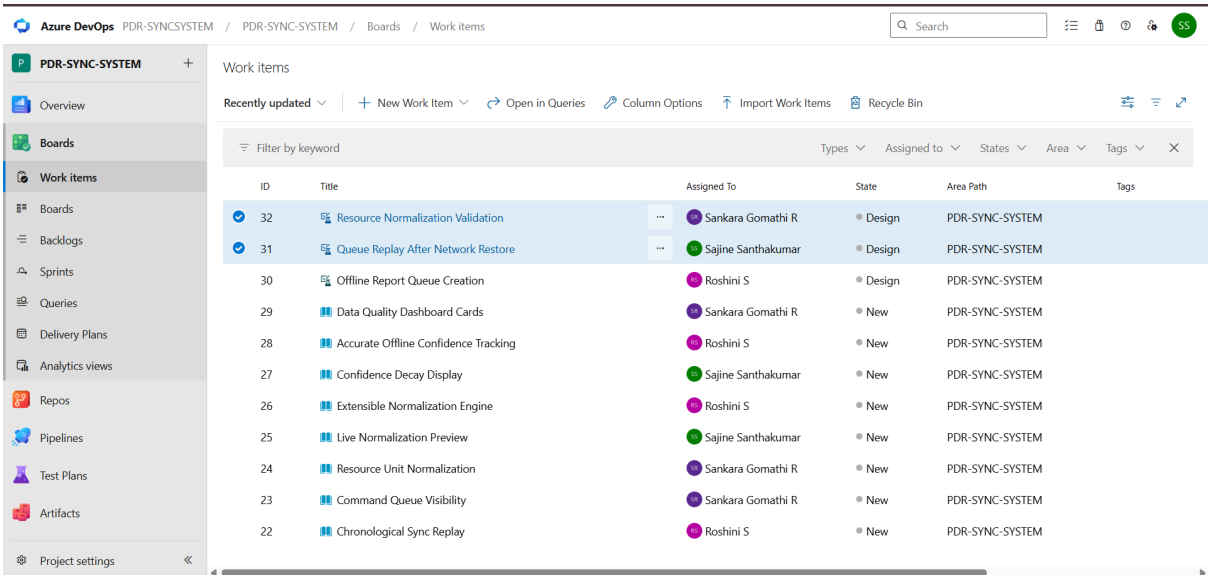
TERM	DESCRIPTION
User Story	Functional requirement from user perspective
Sprint	Time-bound development cycle
Backlog	Collection of pending work items
Task	Small unit of implementation
State	Current progress of work

PROCEDURE:

1. Identify functional requirements of the system
2. Convert functionalities into user stories
3. Create stories in Azure Boards
4. Assign stories to team members
5. Define states and priorities
6. Track progress using Agile workflow
7. Validate stories with system requirements

STEPS TO CREATE USER STORIES IN AZURE:

1. Login to Azure Portal
2. Open Azure DevOps Project
3. Navigate to Boards → Work Items
4. Click “New Work Item”
5. Select “User Story”
6. Enter:
    - Title
    - Description
    - Assigned member
    - State
7. Save the user story
8. Repeat for all project functionalities



USER STORIES FOR PDR-SYNC:

RESOURCE NORMALIZATION VALIDATION

AS A coordinator,
I WANT the system to validate normalized resource units
SO THAT reports remain consistent across organizations.

OFFLINE REPORT QUEUE CREATION

AS A field responder,
I WANT reports to be stored offline
SO THAT data is not lost during network failure.

QUEUE REPLAY AFTER NETWORK RESTORE

AS A system user,
I WANT queued reports to synchronize automatically
SO THAT all offline data reaches the server once connectivity is restored.

CONFIDENCE DECAY DISPLAY

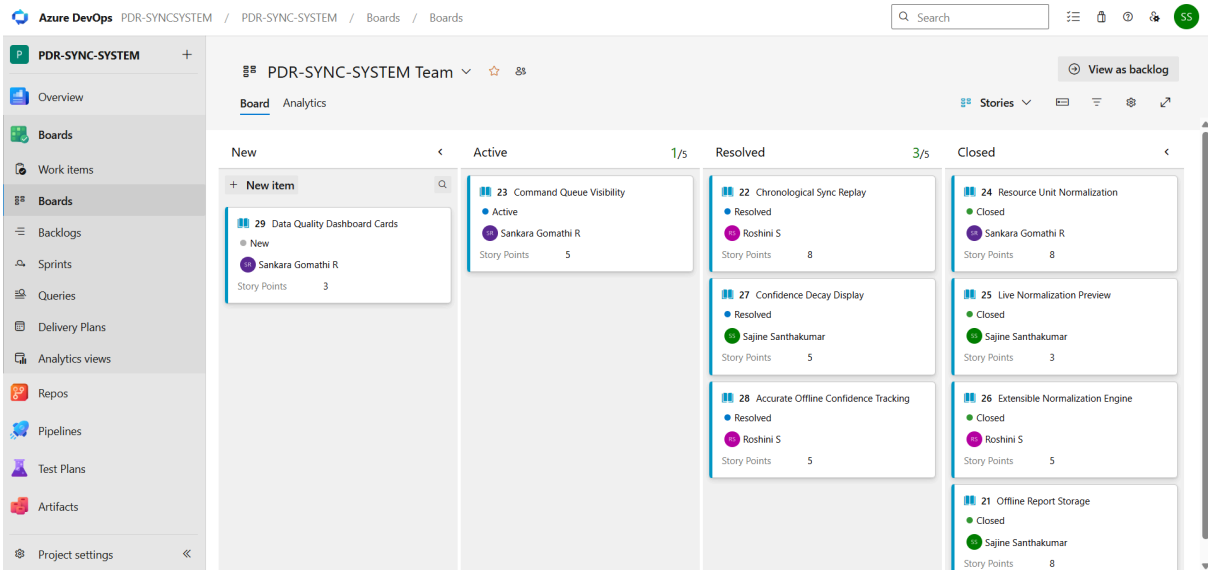
AS A coordinator,
I WANT the system to display confidence decay
SO THAT outdated disaster information can be identified quickly.

COMMAND QUEUE VISIBILITY

AS A responder,
I WANT to view queued offline reports
SO THAT I can verify pending synchronization data.

LIVE NORMALIZATION PREVIEW

AS A coordinator,
I WANT to preview normalized resource values
SO THAT resource calculations remain accurate.



EXPLANATION OF AZURE BOARD SCREENSHOT

The Azure Board contains multiple user stories related to:

- Resource normalization
- Offline synchronization
- Confidence tracking
- Queue management

Each story contains:

- ID
- Title
- Assigned developer
- Current state
- Project area path

The stories are distributed among team members for collaborative Agile development.

RESULT:

Thus, the USER STORIES for the system “PRECISION DISASTER RECOVERY (PDR-SYNC)” were successfully created and managed using Azure Boards for Agile project planning and tracking.
